(Q10) **NOTE:** The estimated concentration of the substance peak in the sample is 2.0%. Currently, PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (along with high concentrations of cannabinoids) from which we believe to be either 100% THC or 99% THCV. If this does show any of reference standards available for your file, please note, this may be a different compound from the main 100% THCV compound and PharmLabs does not believe the standard reference compound. Samples of 100% THCV and 99% THCV are available for purchase. The concentration of all peak (s) are reported as a percentage of the total mass of the sample. The concentration of the sample is estimated to be 2.0%.
